Index of Subjects

Antibiotics, *see also* **Cloxacillin, Penicillin G**
sensitivity, bovine staphylococci, streptococci, corynebacteria, 249
Ascorbic acid, milk, stability, heat processing, exposure to sunlight, 239

Bacteria, Cheddar cheese, flavour, free fatty acid composition, 257
Blood serum, caeruloplasmin detection, 103
Breeding, bull evaluation on skin structure, 183
Bulls, skin structure, correlation with relative breeding value, 183
Butter, flavour, identification of volatile compounds, 131
Buttermilk, oxidized, identification of n-pent-1-en-3-ol, n-pent-1-en-3-one, 123
Butter oil, *see* **Dry butterfat**

Caeruloplasmin, in milk, blood serum, 103
K-Casein, amino acid residues, C-terminal sequence, buffalo's milk, 85
Cheddar cheese, flavour, free fatty acid composition, microbial flora, 257
Cheesemaking, concentrating milk and fat retention of curd, 73
Citrate, dissimilation, estimation, lactic acid bacteria, 39
Clostridium butyricum, spores, heat resistance, 221
Cl. tyrobutyricum, spores, heat resistance, 221
Cloxacillin, sensitivity, bovine staphylococci, streptococci, corynebacteria, 249
udder disease control, dry period, 47
Corynebacteria, bovine, antibiotic sensitivity, 249

Dairy products, *see also individual products*
metallic flavour, oct-1-en-3-one, 89
oxidative deterioration and caeruloplasmin, 103
oxidized, flavour, n-pent-1-en-3-ol, n-pent-1-en-3-one, 123
water-soluble vitamins, content (review), 169
Diet, calcium salts, fatty acids, addition, milk yield and composition, 199
Disease, *see* **Ketosis**
Dry butterfat, identification of volatile compounds, 131
Dry period, mammary gland secretion, quantity, composition, 1, 13

Fatty acids, calcium salts, added to diet, milk yield and composition, 199
composition, Cheddar cheese, effect of microbial flora, 257
milk fat, identification by gas chromatography-mass spectrometry, 115
Flavour, butter, identification of volatile compounds, 131
Cheddar cheese and microbial flora, 257
dairy products, oct-1-en-3-one, 89
n-pent-1-en-3-ol, n-pent-1-en-3-one, 123
lactic cultures and diacetyl–acetaldehyde ratio, 109
Friesian bulls, skin structure, correlation with relative breeding value, 183

Heat resistance, spores, *Clostridium* spp., 221
Heat treatment, milk, deposits, seasonal variation, 137
vitamin stability and dissolved oxygen content, 239
repeated heat processing, 193
Hydrometric method (B.S.I.), total solids determination, milk, suggested correction, 211

Ketosis, pregnanediol estimation, urine, 21

D(−) Lactic acid, production, lactic acid bacteria, 31
L(+) Lactic acid, production, lactic acid bacteria, 31
Lactic acid bacteria, citrate dissimilation, estimation, 39
L(+), D(−) lactic acid production, 31
Lactobacillus acidophilus, L(+), D(−) lactic acid production, 31

Milk, concentration, fat retention by rennet curd, 73
Milk composition, dry period, 1, 13
following suspension of milking, 151
succeeding lactation, after milking throughout pregnancy, 145
vitamins, stability, heat treatment, exposure to sunlight, influence of dissolved oxygen, 239
repeated heat processing, 193
water-soluble, content (review), 169
water-soluble constituents (review), 273
Milk deposits, on heat treatment, seasonal variation, 137
Milk fat, content, milk, and deposit formation on heat treatment, 137
calcium salts, fatty acids, added to diet, 199
estimation by Milko-tester, 65
ewes, equal and unequal milking intervals, 163
fatty acids, identification by gas chromatography-mass spectrometry, 115
phospholipids, oxidation, iodine values, milk, butter, washed-cream serum, 231
Milk Marketing Boards, compositional quality payment schemes, total solids, determination, 207, 211

Milk proteins, caeruloplasmin detection, 103
content, urine, lactating cows, 27
Milk secretion, after milking throughout pregnancy, 145
dry period, 1, 13
following suspension of milking, mid-lactation, 151
rate, equal and unequal milking intervals, ewes, 163
water and water-soluble constituents (review), 273
Milk solids, *see* **Total solids** and **Solids-not-fat**
Milk yield, calcium salts, fatty acids, added to diet, 199
dry period, 1, 13
ewes, equal and unequal milking intervals, 163
following suspension of milking, mid-lactation, 151
skin structure, parent bull, relationship, 183
succeeding lactation, after milking throughout pregnancy, 145
Milking, interval, milk proteins content, urine, 27
milk yield, ewes, 163
suspension, mid-lactation, milk yield, composition, on resumption, in following lactation, 151
throughout pregnancy, milk secretion, succeeding lactation, 145
Milking parlour, equipment, ewes, 215
Milko-tester, estimation of fat content, milk, 65

Nutritive value, water-soluble vitamins, milk, milk products (review), 169

Oxidation, milk, dairy products and caeruloplasmin, 103
phospholipids, milk, butter, washed-cream serum, iodine values, 231
Oxygen, dissolved in milk, vitamin stability, heat treatment, exposure to sunlight, 239

Pasteurization, milk, vitamins, B-complex, content, 193
Penicillin G, sensitivity, bovine staphylococci, streptococci, corynebacteria, 249
udder disease control, dry period, 59
Phospholipids, milk, butter, washed-cream serum, oxidation, iodine values, 231
Pregnanediol, estimation, urine, normal, ketosed cows, 21
Progeny testing, bulls, value of skin structure, 183

Rennet curd, fat retention, effect of concentrating milk, 73

Sheep, milk yield, equal and unequal milking intervals, 163
milking parlour, equipment, 215
Skin structure, bulls, correlation with relative breeding value, 183
Solids-not-fat, content, milk, calcium salts, fatty acids added to diet, 199
Staphylococci, bovine, antibiotic sensitivity, 249
Sterilization, milk, vitamins, B-complex, content, 193
Streptococci, bovine, antibiotic sensitivity, 249
lactic, acetaldehyde and diacetyl production, 109
***Streptococcus lactis* var. *diacetilactis*,** for estimation, citrate dissimilation, lactic acid bacteria, 39
***Str. thermophilus*,** acetaldehyde and diacetyl production, 109
Sunlight, on milk, oxygen content and vitamin stability, 239

Total solids, determination, milk, B.S.I. hydrometric method, suggested correction, 211
design of testing schemes, 207

Udder, *see also* **Milk secretion**
disease, control, antibiotics, dry period, 47, 59
Urine, milk proteins content, lactating cows, 27
pregnanediol estimation, normal, ketosed cows, 21

Vitamin B complex, content, milk, after heat treatment, exposure to sunlight, influence of dissolved oxygen, 239
after repeated heat treatments, 193
Vitamin C, *see* **Ascorbic acid**
Vitamins, water-soluble, content, milk, milk products (review), 169

Water, content, milk, udder (review), 273
